Purpose of the Report

The 2012 Dialysis Facility Report (DFR) is provided as a resource for characterizing selected aspects of clinical experience at this facility relative to other caregivers in this state, ESRD Network, and across the United States. Since these data could be useful in quality improvement and assurance activities, each state's surveying agency may utilize this report as a resource during the FY 2013 survey and certification process.

Please note that the Dialysis Facility Compare (DFC) preview has been moved from the DFR into the new DFC Report.

This report has been prepared for this facility by the University of Michigan Kidney Epidemiology and Cost Center (UM-KECC) and Arbor Research Collaborative for Health with funding from the Centers for Medicare & Medicaid Services (CMS) and is based primarily on Medicare claims and data collected for CMS. It is the seventeenth in a series of annual reports. This is one of 6,052 reports that have been sent to the ESRD Networks for distribution to ESRD providers in the U.S.

This DFR includes data specific to CCN(s): 452860

Overview: This report includes summaries of patient characteristics, treatment patterns, and patient outcomes for chronic dialysis patients who were treated in this facility between January 2008 and December 2011. Mortality, hospitalization, and transplantation statistics are reported for a three- or four-year period. Regional and national averages are included to allow for comparisons. Several of the summaries of patient mortality, hospitalization, and transplantation are adjusted to account for the characteristics of the patient mix at this facility, such as age, sex, race, ethnicity, and diabetes as a cause of ESRD. Unless otherwise specified, data refer to hemodialysis (HD) and peritoneal dialysis (PD) patients combined.

Selected highlights from this report are given on pages 2 through 4. For a complete description of the methods used to calculate the statistics in this report, please see the *Guide to the 2012 Dialysis Facility Reports*. The *Guide* may be downloaded from the methodology section of the Dialysis Reports website at www.DialysisReports.org.

What's New This Year: As part of a continuing effort to improve the quality and relevance of this report, the following changes have been incorporated into the 2012 DFR. Confidence intervals and p-values for the standardized hospitalization measures are now reported in Table 2. Emergency department visit (Table 2) and comorbidity (Table 11) summaries are now calculated for the four-year period. In addition, the percent of patients with Metastatic or Tuberculosis infections based on Medicare claims at the end of the year were added to Table 11. Vocational rehabilitation and frequency of hemodialysis reported on the AFS are now reported in Table 13. Please note that there is no longer a supplemental report, and the following items that were previously included in the Supplement are now reported in the 2012 DFR: (1) Graphical displays of selected measures are included in the highlights section; (2) Dialysis access-related infection rates reported separately by modality using ICD-9 codes for eligible Medicare dialysis patients in your facility are reported in Table 8; (3) Vascular access type and dialysis adequacy measures reported in Medicare claims using V modifiers, value codes and occurrence codes collected beginning July 2010 are reported in Table 8 and Table 6, respectively; and (4) Selected patient characteristics and measures for patients under the age of 18 are included for facilities that treated five or more patients under the age of 18 over the four-year period (Table 16).

How to Submit Comments

Between July 15, 2012 and August 15, 2012, facilities may submit comments to their state surveyor or UM-KECC by visiting www.DialysisReports.org, logging on to view their report, and clicking on the **Comments & Inquiries** tab. Questions or comments after the comment period is over may be submitted, to us directly at Support@DialysisReports.org or 1-877-665-1680.

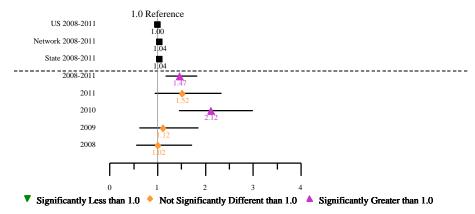

- (1) **State Surveyor:** Dialysis Facilities may submit comments on the DFR for their state's surveyors. State surveyor(s) will receive a copy of their DFR with the comments they submitted in September 2012.
- (2) **UM-KECC:** Submit questions or suggestions to improve the DFR to UM-KECC. These comments will not be shared with CMS or your state surveyor.

Facility Highlights

Standardized Mortality Ratio (SMR) (Table 1):

• At this facility, 2008-2011 SMR is 1.47, which is 47% more deaths than expected. Among all U.S. facilities, 92% of facilities had a four-year SMR (2008-2011) lower than 1.47. This difference is statistically significant (p<0.05), so this higher mortality is unlikely to be due to random chance and probably represents a real difference from the expected mortality in the nation. The 2008-2011 SMR of observed to expected deaths is 1.04 and 1.04 for your State and Network, respectively.

The markers show the values of the SMR for this facility, State, Network, and Nation. The bolded horizontal line shows the range of uncertainty due to random variation (95% confidence interval; significant if it does not cross the 1.0 reference line). Regional and national SMR are plotted above the dotted line to allow for comparisons to facility values.

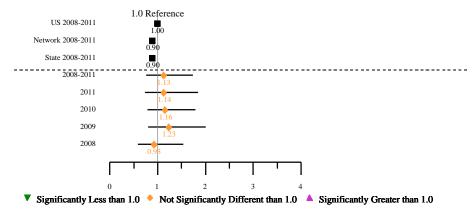

• At this facility, the first-year SMR of observed to expected deaths is 1.61, which is 61% more deaths than expected at this facility. Among all U.S. facilities, 89% of facilities had a first-year SMR lower than 1.61. This difference is not statistically significant (p>=0.05), so this higher mortality could plausibly be just a chance occurrence. The first-year SMR (2008-2010) of observed to expected deaths is 1.01 and 1.01 for your State and Network, respectively.

Standardized Hospitalization Ratio (SHR) (Table 2):

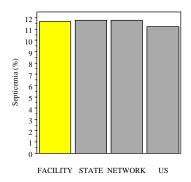

- The 2008-2011 SHR (ED) at this facility is 1.06, which is 6% more ED visits than expected. This difference is not statistically significant (p>=0.05), so this higher ED visit ratio could plausibly be just a chance occurrence. The 2008-2011 SHR (ED) for your State and Network is 0.94 and 0.94, respectively.
- The 2008-2011 SHR (Days) at this facility is 1.25, which is 25% more days hospitalized than expected. This difference is not statistically significant (p>=0.05), so this higher hospitalization could plausibly be just a chance occurrence. The 2008-2011 SHR (Days) for your State and Network is 1.02 and 1.02, respectively.
- The 2008-2011 SHR (Admissions) at this facility is 1.13, which is 13% more admissions hospitalized than expected. This difference is not statistically significant (p>=0.05), so this higher hospitalization could plausibly be just a chance occurrence. The 2008-2011 SHR (Admissions) for your State and Network is 0.90 and 0.90, respectively.

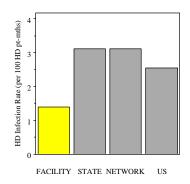

The markers show the values of the SHR (Admissions) for this facility, State, Network, and Nation. The bolded horizontal line shows the range of uncertainty due to random variation (95% confidence interval; significant if it does not cross the 1.0 reference line). Regional and national SHR (Admissions) are plotted above the dotted line to allow for comparisons to facility values.

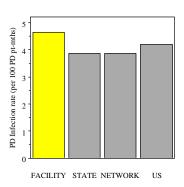

Infection (Tables 2 and 8):

- The percentage of Medicare dialysis patients at this facility hospitalized with septicemia during 2008-2011 was 11.6%, compared to 11.8% in your State, 11.8% in your Network, and 11.2% nationally.
- The rate of Medicare HD patients at this facility with infection in 2011 was 1.4 per 100 HD patient-months, compared to 3.1 in your State, 3.1 in your Network, and 2.6 nationally.
- The rate of PD catheter-related infection was 4.7 per 100 PD patient-months, compared to 3.9 in your State, 3.9 in your Network, and 4.2 nationally.

Transplantation (Table 3):

- Of the patients under age 70 treated at this facility during 2008-2011 who had not previously received a transplant, 3% were transplanted annually, while a rate of 6% would be expected for these patients.
- The 2008-2011 Standardized 1st Transplantation Ratio (STR) of observed to expected number of patients transplanted for this facility is 0.56, which is 44% lower than expected for this facility. This difference is statistically significant (p<0.05) and is unlikely to be due to random chance. The 2008-2011 STR for your State and Network is 0.84 and 0.84, respectively.

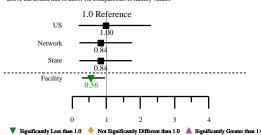

Transplant Waitlist (Table 4):

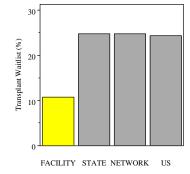

• The percentage of patients on the kidney transplant waitlist on December 31, 2011 in your State and Network is 25% and 25%, respectively. Among the 75 dialysis patients under age 70 treated at this facility on December 31, 2011, 11% were on the kidney transplant waitlist compared to 24% nationally. This difference is statistically significant (p<0.05) and is unlikely to be due to random chance.

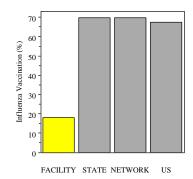

Influenza Vaccination (Table 5):

• Among the 106 Medicare dialysis patients treated at this facility on December 31, 2010, 18% were vaccinated between September 1 and December 31, 2010 compared to 67% nation. This difference is statistically significant (p<0.05) and is unlikely to be due to random chance. The percentage of patients vaccinated in your State, Network, and nation is 70%, 70%, and 67%, respectively.

2008-2011 Standardized Transplantation Ratio (STR)
The markers show the values of the 2008-2011 STR for this facility, State, Network, and Nation.
The bolded horizontal line shows the range of uncertainty due to random variation (95% confidence interval; significant if it does not cross the 1.0 reference line). Regional and national STR are plotted above the dotted line to allow for comparisons to facility values.

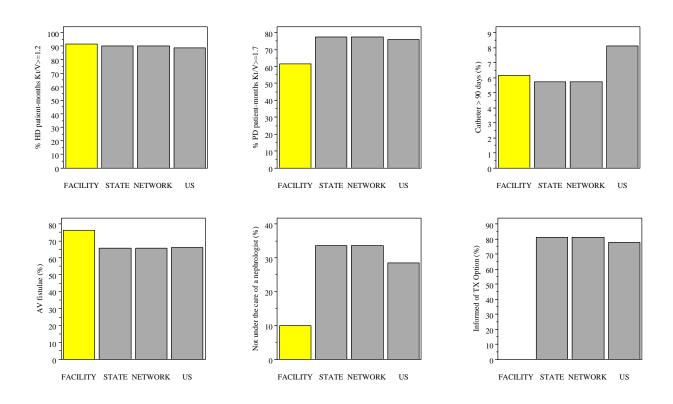

SOHUM-SOUTHEAST HOUSTON DIALYSIS State: TX Network: 14 CCN: 452860

Practice Patterns (Tables 6 and 7):

- Among the 91 ESA-treated dialysis patients included in the analysis in 2011, the average hemoglobin calculated is 11.0 g/dL, compared to 11.0g/dL nationally.
- Among the 87 HD patients in this facility included in the analysis in 2011, 100% had URR above the KDOQI minimum value for URR (65%), compared to 97% nationally.
- In 2011, 92% of eligible HD patient-months had a Kt/V >=1.2, compared to 90% in your State, 90% in your Network, and 89% nationally.
- In 2011, 61% of eligible PD patient-months had a Kt/V >=1.7, compared to 77% in your State, 77% in your Network, and 76% nationally.
- At this facility in 2011, there were no incident patients who had arteriovenous (AV) fistulae in place, compared to 37% nationally. Also at this facility in 2011, 76% of prevalent patients had AV fistulae in place, compared to 66% in your State, 66% in your Network, and 66% nationally.
- Of the prevalent patients receiving hemodialysis treatment at this facility in 2011, 6% had a catheter which had been in place for at least 90 days as their only vascular access, compared to 6% in your State, 6% in your Network, and 8% nationally.

Patient Characteristics (Tables 9 and 10):

- Among the 10 patients with Medical Evidence Forms (CMS-2728) indicating treatment at this facility during 2011:
 - 10% of these patients were not under the care of a nephrologist before starting dialysis, compared to 34% in your State, 34% in your Network, and 29% nationally.
 - •0% of these patients were informed of their transplant options, compared to 81% in your State, 81% in your Network, and 78% nationally.

Prepared by
The University of Michigan Kidney Epidemiology and Cost Center (UM-KECC) under contract with the Centers for Medicare & Medicaid Services

[*1] See Guide, Section IV.

[*2] Values are shown for the average facility, annualized.

[*3] Defined as deaths due to street drugs and accidents unrelated to treatment.

[*4] Calculated as a ratio of deaths to expected deaths (1 to 1d for all patients, 1p to 1q for new patients); not shown if there are fewer than 3 expected deaths.

[*5] A p-value less than 0.05 indicates that the difference between the actual and expected mortality is probably real and is not due to random chance alone, while a p-value greater than or equal to 0.05 indicates that the difference could plausibly be due to random chance.

[*6] The confidence interval range represents uncertainty in the value of the SMR due to random variation.

[*7] All facilities are included in ranking, regardless of the number of expected deaths.

[*8] Sum of 4 years (all patients), or 3 years (new patients), used for calculations; should not be compared to regional averages.

n/a = not applicable.

[*1] Based on patients with Medicare as primary insurer; see *Guide, Section V*.

[*2] Values are shown for the average facility, annualized.

[*3] Standardized Hospitalization Ratio calculated as ratio of actual to expected events (2c/2d for days, 2i/2j for admissions, and 2t/2u for ED visits); not shown if there are too few patient years at risk.

[*4] A p-value less than 0.05 indicates that the difference between the actual and expected hospitalization/ED event is probably real and is not due to random chance alone, while a p-value greater than or equal to 0.05 indicates that the difference could plausibly be due to random chance.

[*5] The confidence interval range represents uncertainty in the value of the SHR due to random variation.

[*6] All facilities are included in ranking, regardless of the number of patient years at risk.

[*7] Includes diagnoses present at admission and diagnoses added during the hospital stay.

[*8] Sum of 4 years used for calculations; should not be compared to regional averages.

[*9] This value may be an underestimate since readmissions discharged after December 31, 2011 are not included.

	No previous kidney transplant	8.4	11.0	11.2	10.0	23.1	23.1	22.3
	< 2 years since start of ESRD	5.9	4.9	0.0	0.0	15.7	15.7	16.4
	2-4 years since start of ESRD	6.8	10.0	11.4	9.4	29.9	29.9	28.5
	5+ years since start of ESRD	12.9	17.5	21.9	13.5	29.9	29.9	29.6

n/a = not applicable [*1] See *Guide, Section VI and VII.* [*2] Values are shown for the average facility. [*3] Values may not sum to 3b due to unknown donor type. [*4] Among first transplants that occurred after the start of dialysis from 2008-2011, 3.9% of transplants in the U.S. were not included because the transplant occurred fewer than 90 days after the start of ESRD and 0.9% were not included because the patient was not assigned to a facility at time of transplant. [*5] Values may not sum to 3f due to unknown donor type. [*6] This section is calculated for the 4-year period only and not reported if there are fewer than 3 expected transplants are to a calculated as ratio of actual (3f) to expected (3g) transplants. [*8] A p-value less than 0.05 indicates that the difference between the actual and expected transplants is probably real and is not due to random chance, while a p-value greater than or equal to 0.05 indicates that the difference is plausibly due to random wariation. [*10] All facilities are included in ranking, regardless of the number of expected transplants. [*11] Sum of 4 years used for calculations; should not be compared to regional averages. [*12] Facility wailist percentage is compared to the U.S. waitlist percentage for that year: 24.0% (2008), 24.3% (2009), 24.4% (2011). A p-value greater than 0.05 indicates that the difference between percent of patients wailisted at the facility and national percentage is plausibly due to random chance. [*13] A missing value indicates that there were no eligible patients in the subgroup.

TABLE 5: Influenza Vaccination Summary for Medicare Dialysis Patients Treated on December 31st of Each Year *1, Flu Seasons September 2008-March 2011

[*1] See *Guide, Section IX.* [*2] Values are shown for the average facility. [*3] Patients may be counted up to 12 times per year.

[*4] Other dialysis includes patients who switch between HD and PD during the month and patients for whom modality is unknown or missing.

[*5] Percent of patient months represented by the corresponding modality percent in 6c. [*6] Sum of eligible HD and PD patients may not add to 6e.

[*7] Claims identified as having 4 or more dialysis sessions per week were excluded from the URR calculations. Among eligible claims in the US, 1.47% were excluded due to frequent dialysis in 2008-2011.

[*8] Claims identified as having 2 or fewer, or 4 or more adult dialysis sessions per week were excluded from the Kt/V calculations.

[*9] Collection of the measures calculated in this section began in July 2010. Includes patients with Medicare as primary insurer and based on the value code D5: Result of last Kt/V.

[*10] Values calculated based only on Kt/V values reported in range.

|*1| See Guide, Section X (Table 7) and Section XI (Table 8).

|*2| Values are shown for the average facility.

|*3| Patients may be counted up to 12 times per year.

|*4| Includes all patients with fistulae, regardless of whether or not they received their hemodialysis treatments using their fistulae.

|*4| Includes all patients with fistulae, regardless of whether or not they received their hemodialysis treatments using their fistulae.

|*5| Patients listed as graft or catheter may have had fistulae in place for future use, but they actually received their treatment through a graft or catheter.

|*6| Based on V modifiers including V5, V6, and V7 for catheter, graft, and fistula, respectively. Collection began July 2010.

|*7| Vascular access section includes adult patients only. Pediatric vascular access data can be found in the pediatric table.

|*8| Other includes patients with >1 access type, it does not include missing access type.

|*9| The ICD-9 infection code for HD patients is 996.62. The ICD-9 infection codes for PD patients include 567.0 and 996.68.

|*10| A p-value greater than or equal to 0.05 indicates the differences between the percent of patients with infection at the facility and national percentage is plausibly due to random change.

|*11| Compared to U.S. value for that year: 0.26 (2008), 0.27 (2009), 0.26 (2010), and 0.24 (2011).

|*12| Compared to U.S. value for that year: 5.51 (2008), 5.55 (2009), 4.52 (2010), and 3.95 (2011).

TABLE 12: How Patients Were Assigned to This Facility and End of Year Patient Status *1, 2008-2011

			This Facility				Regional Averages *2, 2011		
	Measure Name	2008	2009	2010	2011	State	Network	U.S.	
12a	Number of patients placed in facility *1 (n)	159	166	189	132	98.1	98.1	91.1	
12b	Initial patient placement for the year (% of 12a; sums to 100%)								
	Continuing at facility on 01/01	74.8	71.7	61.4	90.9	70.4	70.4	70.1	
	Incident (new to ESRD)	15.1	16.3	11.6	5.3	17.4	17.4	18.5	
	Transferred into facility	10.1	12.0	27.0	3.8	12.2	12.2	11.4	
12c	Patient status at end of year (% of 12a; sums to 100%)								
	Alive in this facility on 12/31	74.8	69.9	63.5	66.7	73.6	73.6	71.9	
	Alive in another facility on 12/31	9.4	17.5	15.3	9.8	9.0	9.0	8.3	
	Received a transplant	2.5	1.8	0.0	5.3	2.3	2.3	2.6	
	Died; death attributed to this facility	8.8	9.0	17.5	15.9	12.0	12.0	13.3	
	Died; death attributed to another facility	1.3	0.0	2.6	0.0	1.1	1.1	1.3	
	Other*3	3.1	1.8	1.1	2.3	2.0	2.0	2.5	

n/a = not applicable

[*1] Based on patients with Medicare as primary insurer on 12/31 each year. See *Guide, Section XIV*.

[*2] Values are shown for the average facility.

[*3] Peripheral vascular disease includes both venous, arterial and nonspecific peripheral vascular diseases.

^[*1] Patient assignment for Tables 1,2,3,10, and 11 only. See *Guide*, Section XV.
[*2] Values are shown for the average facility.
[*3] Also includes dialysis unrelated deaths. Dialysis unrelated deaths are not attributed to any facility for the purposes of the mortality calculations in this report.

TABLE 13: Patient and Staff Counts from the Annual Facility Survey (Form CMS-2744) *1, 2008-2011

			This Fa	cility		Regiona	l Averages *2	, 2011

	Part time social worker	2	0	1	0	0.5	0.5	0.6

^[*1] See Guide, Section XVI (Table 13).

[*2] Values are shown for the average facility.

[*3] Due to rounding, regional average may be slightly greater than 0 (<0.05).

[*3] Values may not sum to exactly 100% because of unknown Medicare status.

[*4] Data as of March 31, 2012. A full time position is defined as a position with at least 32 hours of employment a week, and a part time position is defined as a position with less than 32 hours of employment week (includes positions that were opened but not filled on this date).

[*5] Nursing staff includes registered nurse, licensed practical nurse, vocational nurse, or advanced, practice nurse degree.

TABLE 14: Survey and Certification Activity*1

		This Facility	Regi	onal Averag	es
